

# Professional abrasives meeting the highest demands

## Dura-Green® DIA

The contouring and finishing of all-ceramic and zirconia-based restorations has now become much easier, quicker and safer.

Using diamond particles in a special binder, **Dura-Green DIA** provide outstanding abrasive properties and high efficiency in a wide range of applications.

**Dura-Green DIA** abrasives will allow you to adjust all types of ceramic surfaces, fine anatomical details or fragile, sensitive marginal areas at a low contact pressure – minimising the risk of chipping or micro-cracks.

Proven products for better dentistry

# Dura-Green® DIA

EFFICIENT, VERSATILE, GENTLE ON THE MATERIAL

## CY5: Surface adjustment

Excellent cutting performance offers convenient surface adjustment with efficient material reduction.

## KN7: Framework adjustment

Gentle on the material when making interdental or marginal corrections and wall thickness adjustments.

## TC4: Detailed finishing

Whether dressed or in its original shape, TC4 helps to efficiently create surface details and make occlusal adjustments.

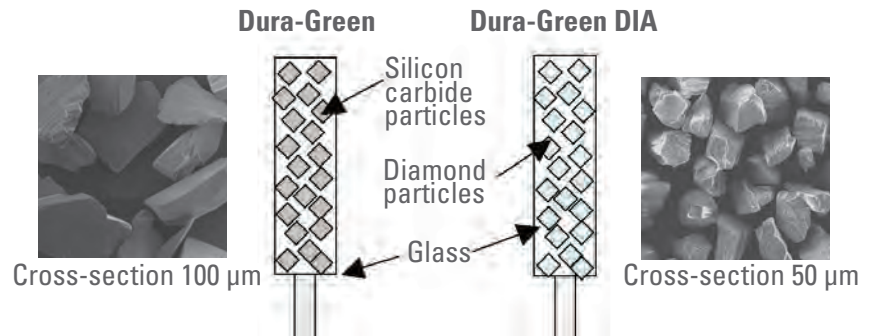

For cleaning and shape adjustment, press Dura-Green DIA against the Shofu Adjuster (aluminium oxide) using a grinding motion.

## Advantages at a glance:

- Efficient and gentle on the material, thanks to Dura-Green DIA abrasives being impregnated with diamonds throughout
- Minimised risk of micro-cracking
- Low contact pressure
- Low vibration
- Minimal heat generation
- High edge stability

The diamond-impregnated microstructure of Dura-Green DIA abrasives ensures a more homogeneous surface pattern and a longer service life, as compared to silicon carbide instruments:

**Ideal for use with:** all-zirconia or zirconia-based restorations, lithium disilicate, aluminium oxide, pressed & layered ceramics and metal surfaces

## SHAPES

Maximum speed: 30,000 rpm
