MIRROR HANDLES

Nordent offers four distinct mirror handle designs. Each is available in either cone socket or simple stem thread configurations and will accept any brand of mirror head. All are made using the finest stainless steel to provide a lifetime of trouble-free service.

DURALite® ColorRings Mirror Handle

DuraLite ColorRings Mirror Handle has a large 3/8" (9.5mm) diameter and a weight of only 24 grams. Our exclusive Control Ring™ Grip provides maximum comfort and control. With four interchangeable color rings and 14 colors to choose from, you can identify, organize and customize based on your specific needs.

Handle Selection:	HM20 (Cone Socket)	HM22 (Simple Stem)
-------------------	--------------------	--------------------

DURALite® Round Mirror Handle

DuraLite ROUND Mirror Handle has a large 3/8" (9.5mm) diameter with a tapered body and a weight of only 15.7 grams. Our exclusive ControlRing Grip provides maximum comfort and control in this ultra-light weight mirror handle.

Handle Selection:	HM16 (Cone Socket)	HM18 (Simple Stem)
-------------------	--------------------	--------------------

DURALite® Hex Mirror Handle

DuraLite HEX Mirror Handle is often called the "Hand Form Mirror Handle." The diameter measures 25/64" (10mm) across multiple facets for maximum comfort and unlimited finger positioning. At only 25 grams, this attractive, light-weight handle will improve comfort and control.

Handle Selection:	HM12 (Cone Socket)	HM14 (Simple Stem)
-------------------	--------------------	--------------------

Standard Mirror Handle

Standard Mirror Handle has a 1/4" (6.3 mm) diameter and a weight of 29 grams. The handle features a ruler on one side for endo measurements. The knurled grip is segmented to add an extra level of control.

Handle Selection:	HM9 (Cone Socket)
-------------------	-------------------

Standard Mirror Handle

Standard Mirror Handle has a 1/4" (6.3mm) diameter and a weight of 29 grams. The knurled grip is segmented to add an extra level of control.

Handle Selection:	HM10 (Cone Socket)	HM11 (Simple Stem)

MIRROR HEADS

Single Sided

Front Surface/Rhodium Coated

#4
Has a single reflective surface that is 22 mm (7/8") in diameter.
M4 (Cone Socket - shown)
M4DOZ (Cone Socket - box of dozen)
M4S (Simple Stem)
M4SDOZ (Simple Stem - box of dozen)

#5
Has a single reflective surface that is 24 mm (15/16") in diameter.
M5 (Cone Socket - shown)
M5DOZ (Cone Socket - box of dozen)
M5S (Simple Stem)
M5SDOZ (Simple Stem - box of dozen)

Double Sided

Front Surface/Rhodium Coated

#M4DS
Has two reflective surfaces that are 22 mm (7/8") in diameter.
M4DS (Cone Socket - shown)

#M5DS
Has two reflective surfaces that are 24 mm (15/16") in diameter.
M5DS (Cone Socket - shown)

EXPLORERS

Explorers are used to examine teeth for decay (caries), calculus and other abnormalities. They have thin, flexible tips that taper to a sharp point and come in various single end and double end patterns. All Nordent explorer tips are made from spring-tempered stainless steel and are machine ground to exacting tolerances. Each tip is then hand-sharpened and formed into its final shape by expert craftsmen. With Nordent, you can be assured of the highest level of quality, consistency, and the sharpest tips in the industry.

EXPROS

Expros combine an Explorer tip and a Probe tip into one easy-to-use double-end instrument. All Nordent Expro tips are made from spring-tempered stainless steel and machine ground to exacting tolerances. The millimeter measurements are precisely cut into the Probe tips. Color-coding is applied to probes under extreme temperatures so that the color penetrates the surface of the tip. Probe tips undergo additional tight-tolerance grinding to achieve the desired readability for each marking. Explorers are hand-sharpened to a point. All tips are then formed by hand into their final shape by expert craftsmen.

PERIODONTAL PROBES

Probes are used to measure periodontal pocket depth in millimeter increments. All Nordent Probe tips are made from spring-tempered stainless steel and machine ground to exacting tolerances. The millimeter measurements are precisely cut into the Probe tips. Color-coding is applied to probes under extreme temperatures so that the color penetrates the surface of the tip. Probe tips undergo additional tight-tolerance grinding to achieve the desired readability for each marking. All tips are then hand-formed into their final shape by expert craftsmen.
